E-COMMERCE DATA ANALYTICS

Sales Performance & Growth Report

A comprehensive analysis of ₹4.29M revenue, identifying fulfillment bottlenecks, payment patterns, and strategic profit solutions.

Executive Summary & Key KPIs

₹4.29M
TOTAL NET REVENUE
Across 4 main product categories

439
TOTAL ORDERS
Generated across 5 major states

1,000+
UNITS SOLD
Led by Electronics & Fashion

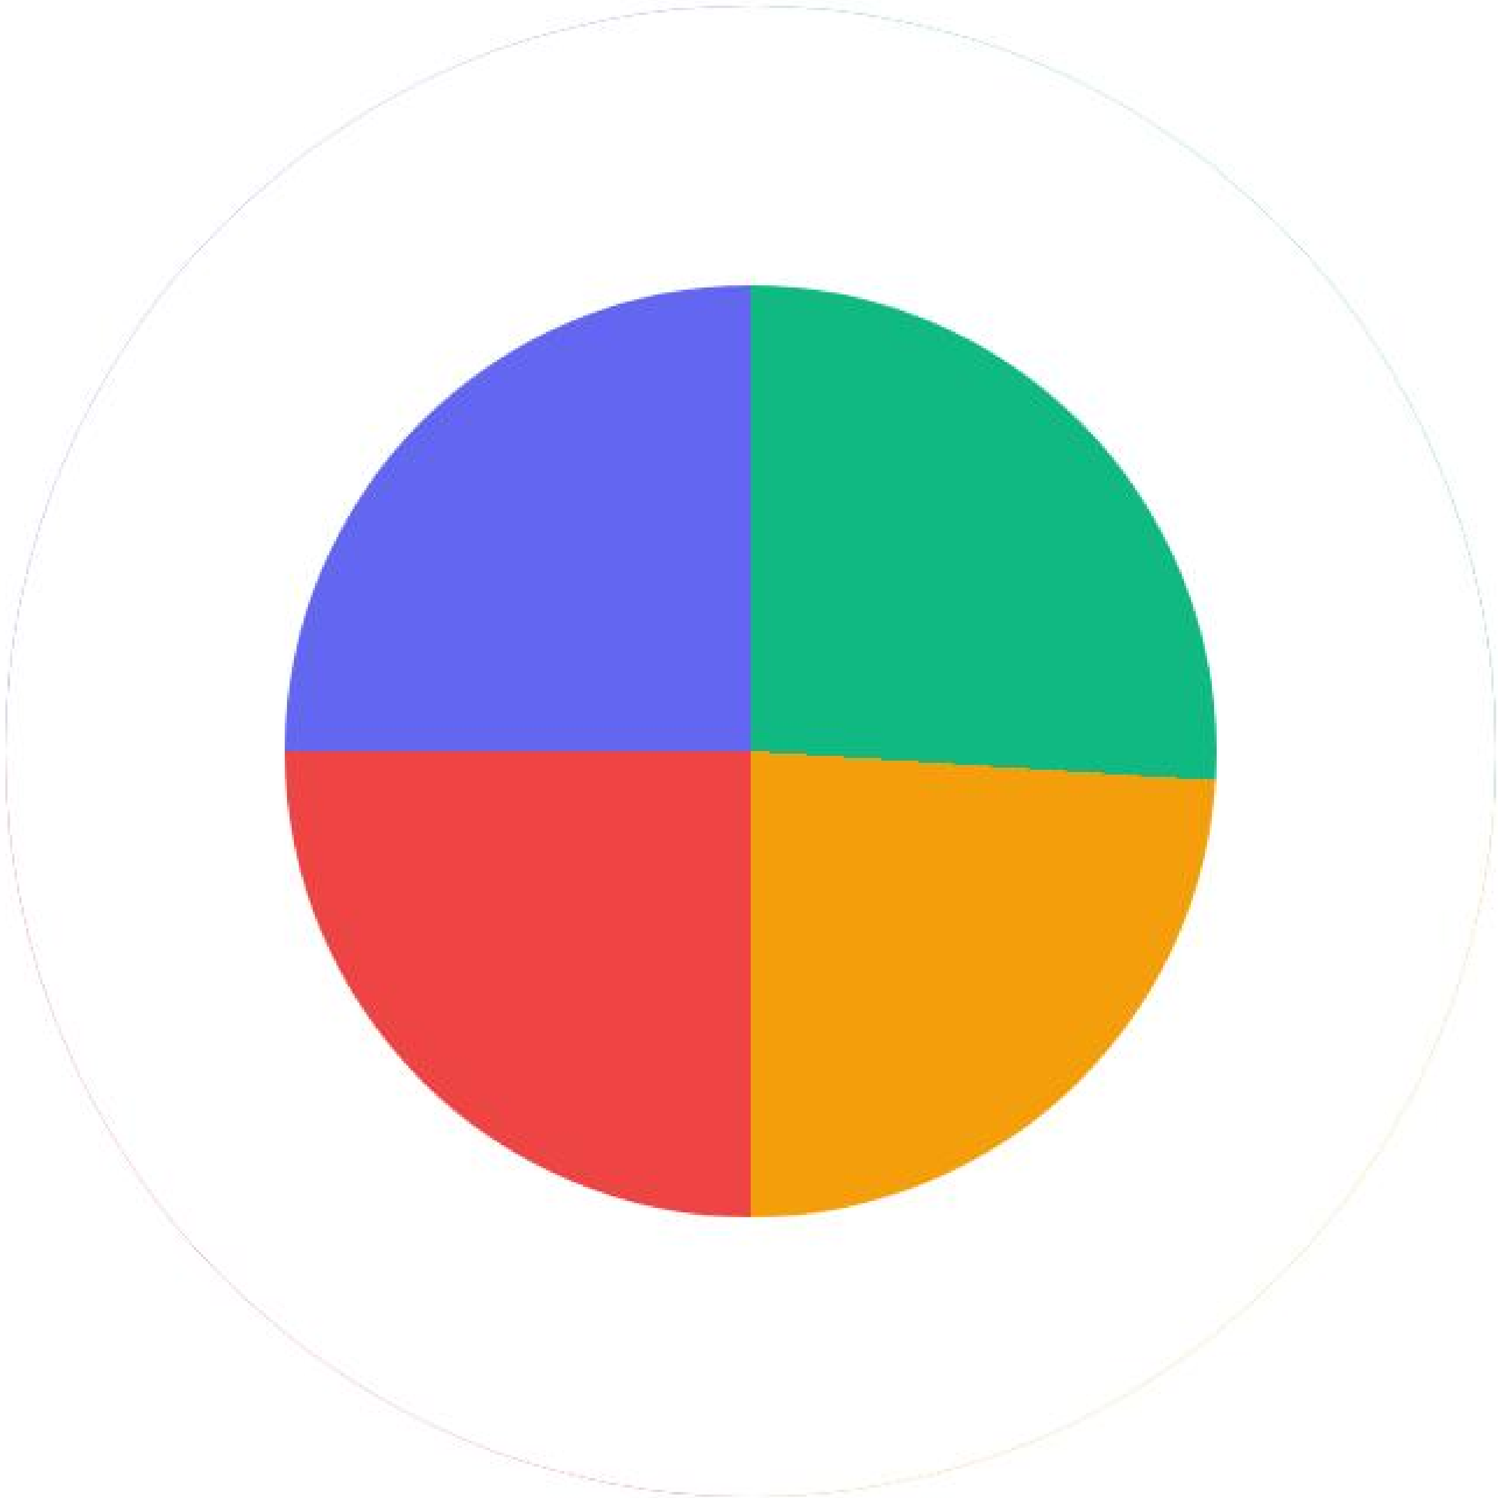
26%
DELIVERY FULFILLMENT
50% Returns & Cancellations

Key Takeaway: *While top-line revenue reached ₹4.29M, severe fulfillment friction (cancellations + returns) is bleeding net profits.*

PART 1: The Core Business Problem

Analyzing order status metrics reveals major operational inefficiencies that hinder revenue realization.

Critical Bottleneck: 50% Order Leakage



- Delivered Orders (26%) — Realized Sales
- Pending Orders (24%) — In Transit / Processing
- Returned Orders (25%) — Direct Revenue Loss
- Cancelled Orders (25%) — Lost Conversion

Insight: *Only **26%** of orders complete successfully. 1 out of 4 orders is returned, and 1 out of 4 is cancelled, creating huge reverse logistics costs.*

Why Are Orders Failing?

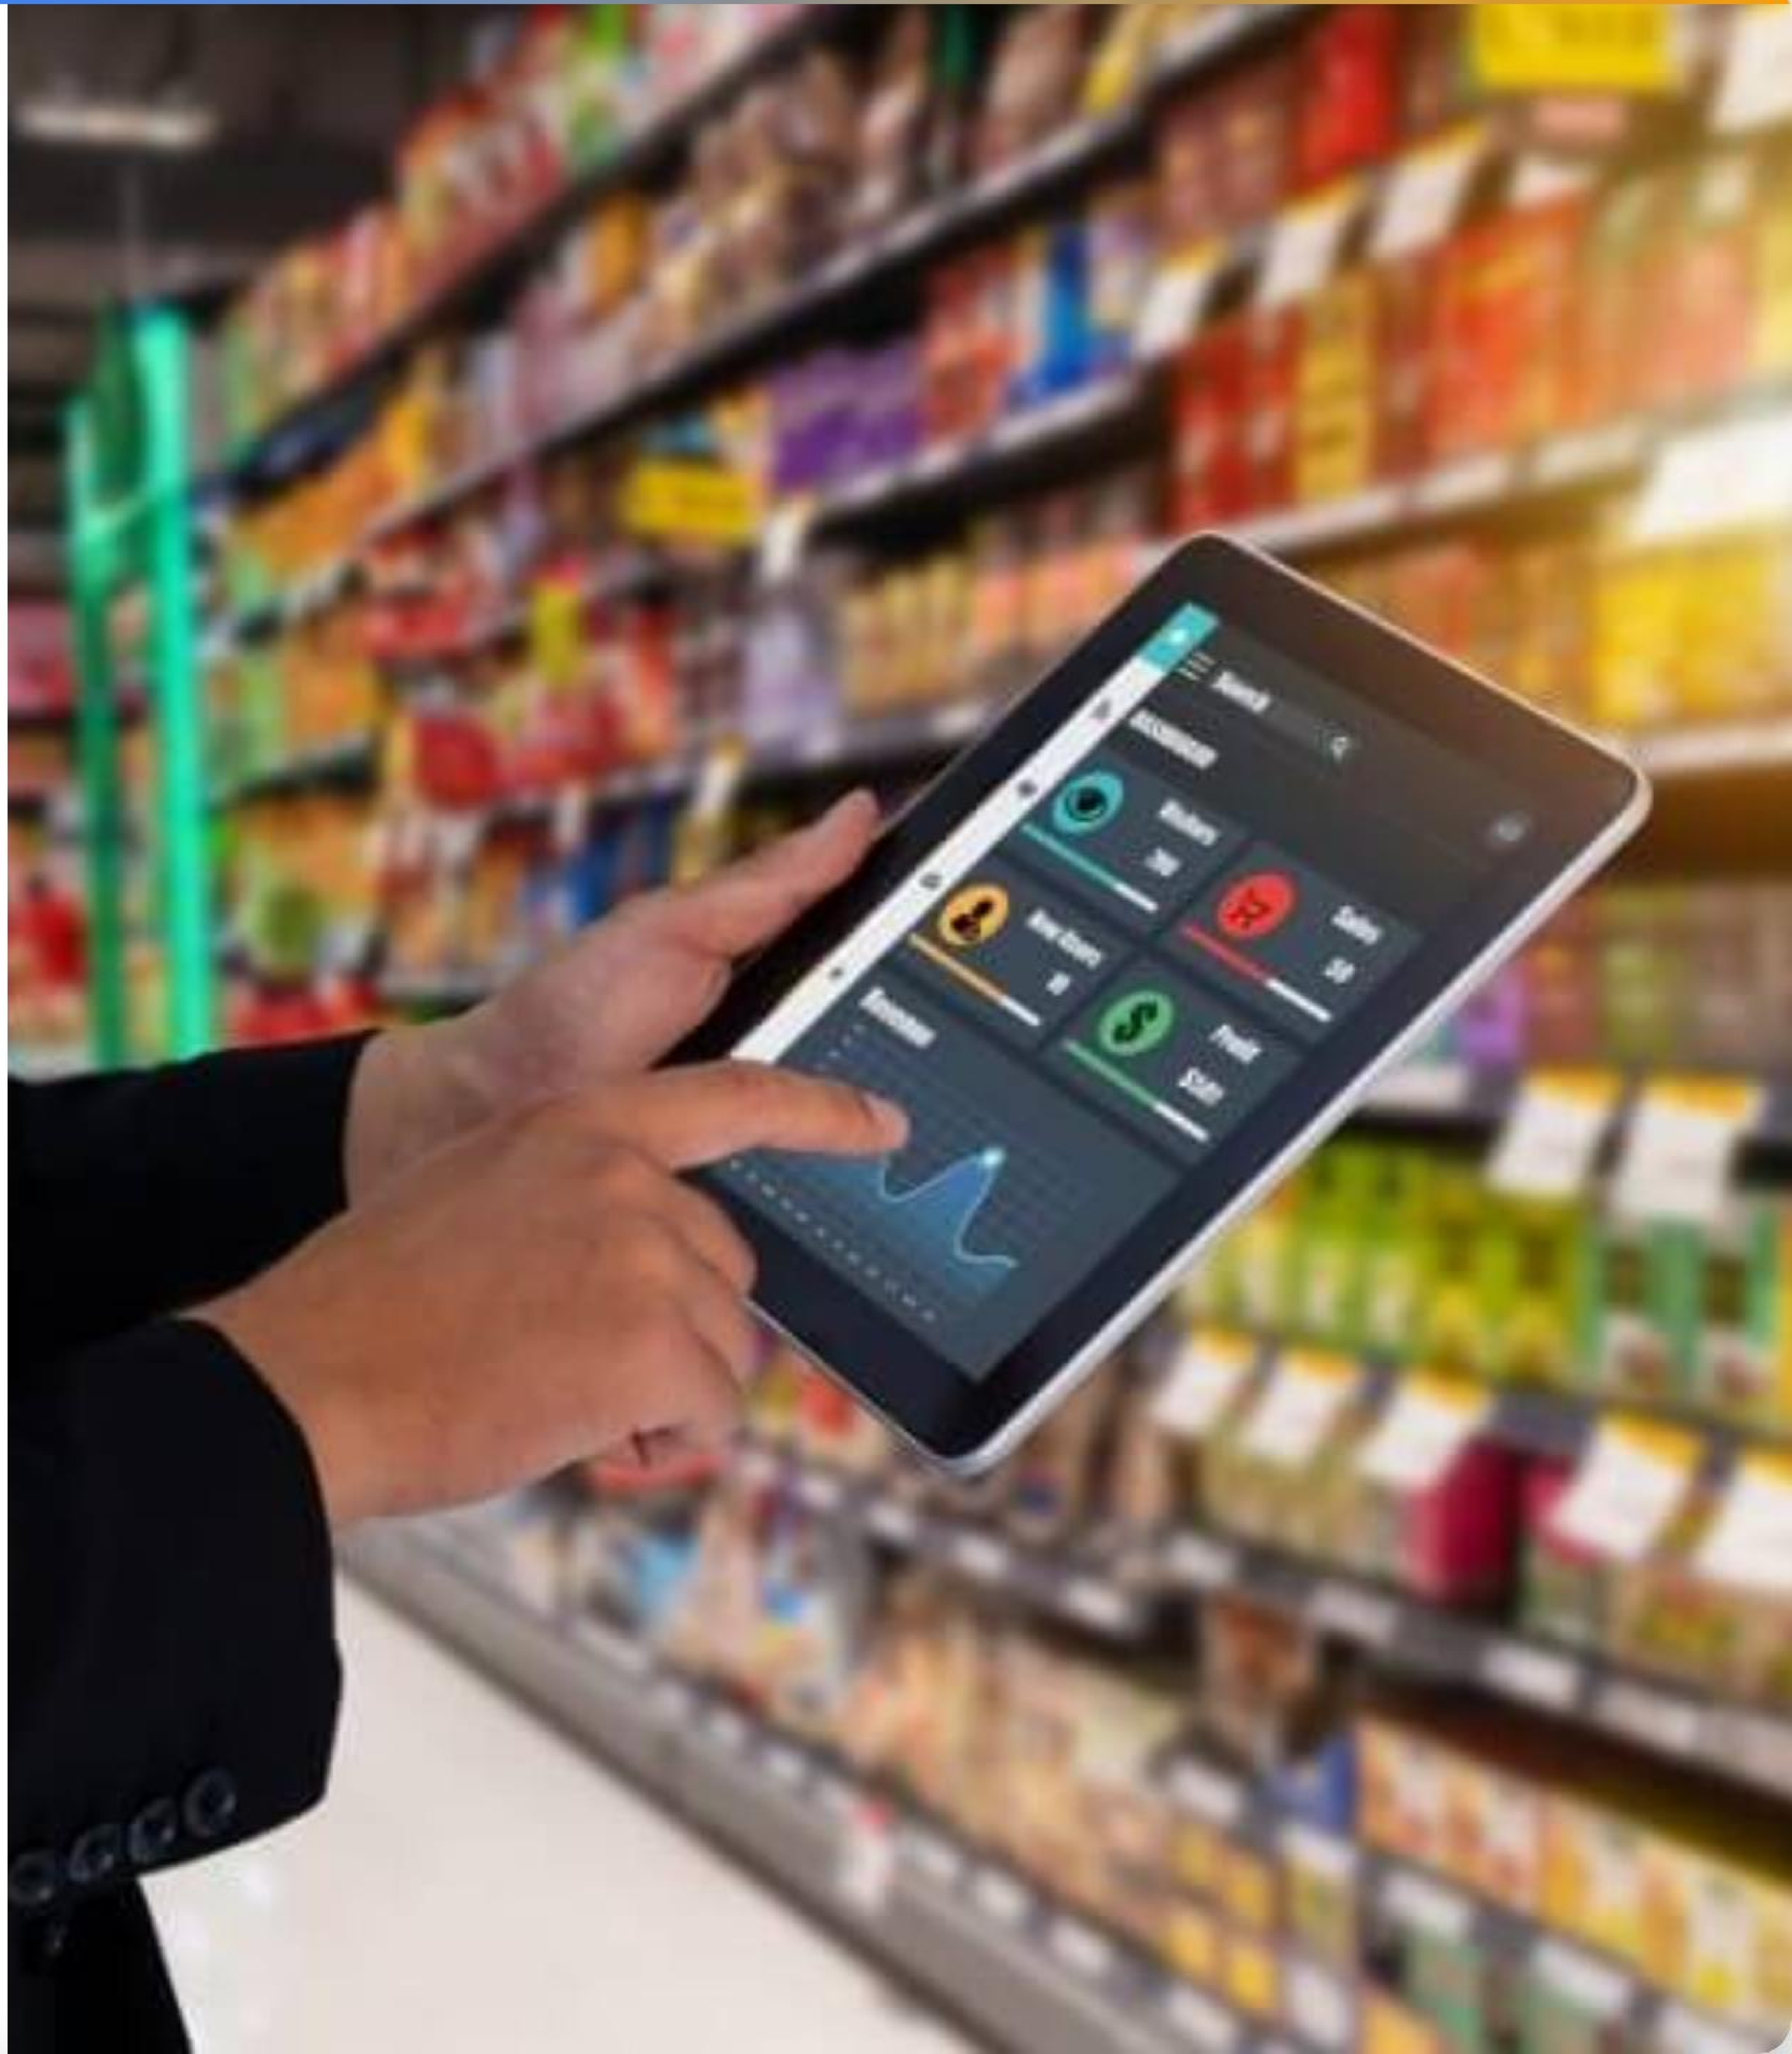
Root Cause Breakdown

1. Delivery Delays: Long transit timelines lead to high cancellation rates before dispatch.

2. COD & Payment Friction: Cash on Delivery (COD) accounts for 23% of orders and exhibits 3x higher return rates compared to prepaid modes.

Impact on Profitability

Every returned order costs up to 1.5x of shipping charges plus restocking fees, eroding product margins.



PART 2: Sales & Revenue Analysis

Evaluating revenue across product categories, monthly trends, regional hubs, and payment preferences.

Revenue Distribution by Category

*Key Insight: **Electronics** drives nearly half of total gross revenue (45%), followed by **Fashion** (27%). Marketing budgets should prioritize these high-value categories.*

Monthly Sales Trend & Peak Demand

Trend Analysis: *Revenue surges sharply during Q4 (Nov-Dec festival season) reaching up to **₹800K/month**, while mid-year demand stays flat around ₹350K–₹400K.*

Top Products & High-Performing States

Top 5 Products	Category	Top State Markets	Revenue Contribution	Demand Level
Laptop	Electronics	Maharashtra	High (₹1.2M)	★★★★★
Chair	Furniture	Karnataka	Medium (₹650K)	★★★★☆
Watch	Fashion	Uttar Pradesh	Medium (₹520K)	★★★★☆
Bottle	Home	Delhi	Moderate (₹310K)	★★★☆☆
Mouse	Electronics	Rajasthan	Moderate (₹220K)	★★★☆☆

Geographic Focus: *Maharashtra and Karnataka generate over 50% of orders. Warehouses should be strategically located near these hubs.*

Payment Preferences & Friction

Digital Wallets (23%)

High adoption due to instant rewards. Low return rate (<10%). Highly preferred by frequent online shoppers.

COD (23%)

Popular in tier-2 cities but triggers high impulse returns (38% return rate). Requires verification before dispatch.

NetBanking (21%)

Steady usage for high-ticket items like Laptops. High conversion stability with under 5% cancellation rate.

UPI & Cards (33%)

UPI (18%) and Cards (15%) drive fast checkouts. Prepaid incentives can shift COD buyers to digital payment.

PART 3: Business Recommendations

Actionable, high-impact strategies to reduce returns, boost order fulfillment, and increase total profit.

5 Steps to Increase Profit & Sales

- **Reduce Returns via OTP Verification for COD:** Implement mandatory OTP confirmation for Cash on Delivery orders to eliminate fake/impulse orders and cut return rates from 25% down to under 10%.
- **Offer Incentives on Prepaid Payments:** Give a 3%–5% instant discount for UPI and Wallet payments to shift customers away from COD, securing revenue upfront and reducing cancellation risk.
- **Optimize Regional Stocking in Top States:** Stock high-demand items like Laptops and Chairs in local fulfillment centers across Maharashtra and Karnataka for faster 24-48 hour delivery.
- **Bundle High-Margin with Low-Demand Products:** Bundle fast-selling items (Laptops/Watches) with slow-moving stock (Bottles/Mice) to increase Average Order Value (AOV) and clear inventory efficiently.
- **Capitalize on Q4 Seasonal Peak Demand:** Scale up targeted ad spending and inventory 30 days prior to Q4 (Oct-Dec) to maximize revenue during peak consumer shopping windows.
